

PROJECT ABSTRACT

LocalNest – Community Local Services Portal

1. Problem Statement (Existing System)

People often depend on personal contacts, neighbourhood recommendations, or social media groups to find trusted local service providers. Searching for plumbers, electricians, housemaids, painters, taxi drivers, appliance technicians, carpenters, and other skilled workers can be time-consuming and unreliable. At the same time, many skilled workers find it difficult to promote their services and reach nearby customers. There is no dedicated community platform that connects local residents with verified service providers in one place.

2. Objective

The objective of LocalNest is to develop a community-based platform that connects neighbourhood residents with trusted local skilled workers. The system enables customers to easily browse different service categories, view verified providers, and book services online. Skilled workers can register and offer their services after admin approval. The platform aims to simplify local service booking while supporting employment opportunities within the community.

3. Proposed Solution

LocalNest is a mobile application that provides a home screen with service categories displayed in a grid layout, including Plumber, Electrician, Housemaid, Painter, Taxi Driver, Home Appliance Technician, Carpenter, AC Technician, Gardener, and Mason. Skilled workers can register by submitting their personal details, phone number, address, experience, service category, and required documents. Their profiles are reviewed and approved by the admin before becoming visible to customers. Customers can browse nearby providers, view profiles, and book services by selecting a preferred date and time. Service providers receive booking requests and update their availability. Admin manages users, providers, bookings, service categories, and complaints through a centralized dashboard.

4. Technology Stack

Component	Technology
Frontend (Mobile)	Flutter
Backend	Node.js + Express.js
Database	PostgreSQL
Image Storage	Cloudinary
Authentication	JWT (JSON Web Token)
Notifications	Firebase Cloud Messaging (FCM)

5. Benefits of the Project

- Provides quick access to trusted local service providers.
- Creates more employment opportunities for skilled workers.
- Simplifies service booking through a single platform.
- Ensures trust through admin verification of providers.
- Strengthens neighbourhood connectivity and community support.

MODULE DESCRIPTION

Admin

- Verify Service Providers
 - Manage Customers
 - Manage Service Categories
 - Approve/Reject Provider Registration
 - Manage Bookings
 - Handle Complaints
 - View Reports
-
- View Reports
-

Service Provider

- Register/Login
 - Submit Documents for Verification
 - Create Service Profile
 - Select Service Category
 - Set Availability
 - Accept/Reject Booking Requests
 - Update Job Status
 - View Booking History
-

Customer

- Register/Login
- Browse Service Categories
- Search Nearby Providers
- View Provider Profile
- Book Service
- View Booking Status
- Rate & Review Providers
- Receive Notifications

Service Categories

- Plumber
 - Electrician
 - Housemaid
 - Painter
 - Taxi Driver
 - Home Appliance Technician
 - AC Technician
 -
-
-

Main Modules

1. Authentication Module
2. Customer Management
3. Service Provider Management
4. Provider Verification System
5. Service Category Management
6. Booking Management
7. Ratings & Reviews
8. Notifications
9. Reports & Analytics
10. Admin Dashboard

Total Modules: 10
