

PROJECT ABSTRACT

PalCare – Palliative Volunteer Network

1. Problem Statement (Existing System)

Palliative care organizations provide essential support to patients who require long-term medical and home care. However, managing patient requests, volunteer availability, home visits, and service records is often done manually through phone calls or paper records. This makes coordination difficult and can lead to delayed services and communication gaps. The absence of a centralized digital platform affects the efficiency of palliative care management.

2. Objective

The objective of PalCare is to develop a centralized platform for managing palliative care services by connecting palliative organizations, volunteers, patients, and caregivers. The system enables organizations to assign volunteers, schedule home visits, and manage service requests efficiently. It aims to improve communication, reduce manual work, and ensure timely support for patients through organized digital management.

3. Proposed Solution

PalCare is a web and mobile application that allows palliative organizations to register patients, volunteers, and caregivers in a centralized system. Patients or caregivers can request services such as home visits, medicine support, wheelchair assistance, food support, ambulance assistance, and counseling. Volunteers can update their availability and receive assigned service requests. Organizations can schedule home visits, maintain patient records, and monitor volunteer activities. Admin manages organizations, volunteers, patients, service requests, and reports through a centralized dashboard. Notifications remind volunteers of upcoming visits and inform caregivers about service updates.

4. Technology Stack

Component	Technology
Frontend (Mobile)	Flutter
Backend	Node.js + Express.js
Database	PostgreSQL
Image Storage	Cloudinary
Authentication	JWT (JSON Web Token)
Notifications	Firebase Cloud Messaging (FCM)

5. Benefits of the Project

- Improves coordination between organizations, volunteers, and caregivers.
- Organizes patient records and service requests digitally.
- Simplifies volunteer scheduling and home visit management.
- Reduces communication delays and manual paperwork.
- Enhances the quality and efficiency of palliative care services.

MODULE DESCRIPTION

Admin

- Manage Organizations
 - Verify Volunteers
 - Manage Patients
 - Manage Caregivers
 - View Reports
 - Manage Service Categories
 - Monitor Activities
-

Palliative Organization

- Register/Login
 - Manage Patient Records
 - Register Volunteers
 - Schedule Home Visits
 - Assign Volunteers
 - Track Service Requests
 - View Reports
-

Volunteer

- Register/Login
- Create Profile
- Update Availability
- View Assigned Visits
- Accept/Complete Service Requests
- Update Visit Status
- Receive Notifications

Patient / Caregiver

- Register/Login
 - Create Patient Profile
 - Request Home Visit
 - Request Medicines
 - Request Wheelchair or Medical Equipment
 - Request Food Support
 - Request Ambulance Assistance
 - View Request Status
 - Receive Notifications
-
-

Main Modules

1. Authentication Module
2. Organization Management
3. Volunteer Management
4. Patient Management
5. Caregiver Management
6. Service Request Management
7. Home Visit Scheduling
8. Notifications
9. Reports & Analytics
10. Admin Dashboard

Total Modules: 10
